

Revolabs Wireless Microphone Systems for Houses of Worship

The Revolabs product line allows Houses of Worship to reach out to a greater number of individuals, through broadcasts, podcasts, and recordings of everything from the sermon to religious classes.

- Unobtrusive Wireless Microphones
- Rechargeable, No batteries or battery packs
- Easy-to-use

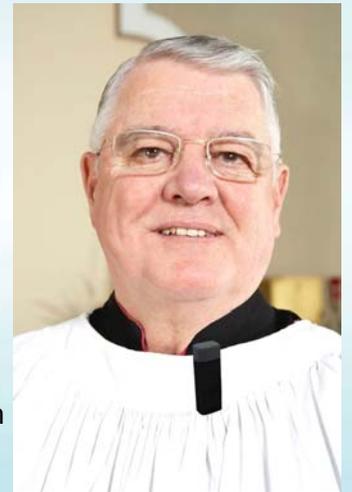

Ideal for Small Religious Study Groups and Large Gatherings

Revolabs offers a wide range of products, from the Executive HD Wireless System that supports up

to 24 microphones, to the xTag USB Wireless Microphone that can be used by the worship leader to record a sermon podcast, so that everyone can wear an individual microphone and the messages will be heard.

Small, Unobtrusive Wireless Microphones

The Audio/Visual equipment in Houses of Worship must have an aesthetically pleasing design and not interfere with the beauty of the architecture, stained glass, and/or other icons. All of the Revolabs Wireless Microphones are sleek and unobtrusive and come in a wide variety of mix-and-match types: wearable, tabletop, and XLR adapter for handheld microphone. The wireless microphones are small and ultra light, and can be impervious to GSM noise from cell phones and PDAs. Users can move about and still be heard.

Ease of Implementation and Use

Simple enough for volunteers to operate. Remove the Wireless Microphone(s) from the Charger Base, un-mute the microphone by pressing the Mute Button on the microphone and the microphone is ready to go. The Executive HD Base Station has a front panel LCD display which allows easy access to view status and certain commands and includes the ability to remotely control the Base Station through an Intranet. It also has serial connectivity with all room control systems.

Rechargeable, No Batteries

The Revolabs Wireless Microphone is rechargeable and the battery provides eight hours of talk time. A recharge to 85 percent capacity can be attained in about 45 minutes. The microphone beeps if it is out-of-range, or flashes if out-of-charge, so that users know to bring it back and replace it in the Charger Base.

Clear, Intelligible Audio

Voice intelligibility is of crucial importance since services are done through the spoken word. The Executive HD Wireless Microphone System frequency response is CD quality, 50 Hertz to 20k Hertz, which allows it to pick up the entire human voice spectrum of 80 Hz to 14 kHz.
